Table 1: Revision History

1 Introduction

This document will provide a specification of a test plan for an automated pool playing robot and report on the results of that plan.

1.1 Overview

This document breaks down the required testing for each domain of the system. It begins with the hardware aspect, then moves to the electrical side and then finishes with software. Each section will go into further detail to describe each test case. Lastly, a summary of the results of testing will be provided to conclude the document.

1.2 Purpose

The aim of this document is to illuminate any design flaws, software bugs, or other issues in the system. Once these issues are discovered, the engineering team will be able to work on eliminating them or minimizing their frequency and consequences.

1.3 Naming Conventions & Definitions

This section outlines the various definitions, acronyms and abbreviations that will be used throughout this document in order to familiarize the reader prior to reading.

1.3.1 Definitions

Table 2 lists the definitions used in this document. The definitions given below are specific to this document and may not be identical to definitions of these terms in common use. The purpose of this section is to assist the user in understanding the requirements for the system.

Table 2: Definitions

Term	Meaning
X-axis	Distance along the length of the pool
	table
Y-axis	Distance across the width of the pool
	table
Z-axis	Height above the pool table
End-effector	The end of the arm that will strike the
	cue ball
θ	Rotational angle of end-effector
Cue	End-effector
Personal Computer	A laptop that will be used to run the
	more involved computational tasks such
	as visual recognition and the shot selec-
	tion algorithm
Camera	Some form of image capture device (e.g.
	a digital camera, smartphone with a
m .11. 0	camera, etc.)
Table State	The current positions of all the balls on
	the table
Entity	Classes that have a state, behaviour
	and identity (e.g. Book, Car, Person,
D. I	etc.)
Boundary	Classes that interact with users or ex-
	ternal systems
Double	Double-precision floating point num-
	bers

1.3.2 Acronyms & Abbreviations

Table 3 lists the acronyms and abbreviations used in this document.

Table 3: Acronyms and Abbreviations

Acronym/Abbreviation	Meaning
VR	Visual Recognition
PC	Personal Computer
μC	Micro-Controller
CRC	Class Responsibility Collaboration
TBT	To Be Tested

2 Traceability Matrix

The following traceability matrices will demonstrate that the tests to be performed prove that each of the specified requirements have been tested.

Functional Requirements Traceability Matrix

3 Mechanical Components

Test ID: 12.1 Synchronous M	Totion in X Rail Status: TBT							
Description: Verify that X-Rails can synchronously move to while loaded	the same location at the same speed without getting stuck							
Pass/Fail Condition: If rail moves adequately and quickly as expected								
Pre-Conditions: None								
Input: Location along x-direction (i.e. 2000 steps)								
Expected Results: Smooth and consistent motion along axis	Actual Results:							
until position is met. Followed by an immediate stop								
Post-Conditions: Rails are stationary with no slip.								

Table 6: Synchronous Motion in X Rail

Test ID: 12.2	Motion i	n Y Rail	Status: TBT					
Description: Verify that Y-Rail of	can move to a location withou	it getting stuck while loaded						
Pass/Fail Condition: If rail mov	Pass/Fail Condition: If rail moves adequately and quickly as expected							
Pre-Conditions: None								
Input: Location along y-direction	on							
Expected Results: Smooth and until position is met. Followed	<u> </u>	Actual Results:						
Post-Conditions: Rail is station	ary with no slip.							

Table 7: Motion in Y Rail

Test ID: 12.3 End-Effector Orientation	Status: TBT
Description: Verify that EE-Base Motor can orient to a specific angle without getting stuck w	vhile loaded
Pass/Fail Condition: If motor turns adequately and quickly as expected to correct angle	
Pre-Conditions: None	
Input: Angle of orientation with respect to the x-axis	
Expected Results: Smooth and consistent motion until orientation is met. Followed by an immediate stop	
Post-Conditions: Motor is stationary.	

Table 8: End-Effector Orientation

Test ID: 13.2	Shooting Mechan	nism Orientation	Status: TBT					
Description: EE is position	ed correctly and waiting command	d to power piston						
Pass/Fail Condition: Pistor	Pass/Fail Condition: Piston is settled at correct oreintation, awaiting command to actuate piston							
Pre-Conditions: Motors ori	Pre-Conditions: Motors orient piston to proper orentation							
Input: Position and orienta	Input: Position and orientation components sent to Arduino							
	moves to desired location and	Actual Results:						
waits for piston signal Post-Conditions: Piston can be safely actauted and strike cue ball								

Table 9: Shooting Mechanism Orientation

Test ID: 16.1	Perimeter Coverage	Status: TBT						
Description: EE will be move	ed around the table to ensure that it is able to reach all location	ns and orientations						
Pass/Fail Condition: EE is c	Pass/Fail Condition: EE is capable of completing a full trip around the perimeter without stops							
Pre-Conditions: None								
Input: Motion command from	m Arduino							
Expected Results: EE will tra	avel around perimeter of table. Actual Results:							
Inspection that its location required.	is sufficient for shot-taking is							
Post-Conditions: System awa	aits next command.							

Table 10: Perimeter Coverage

Test ID: 16.2 Ball Avoidance	Status: TBT
Description: As the EE is moving around the table it much avoid the balls to not in	nterfere with gameplay
Pass/Fail Condition: Able to move randomly around table without moving rolling of	or stationary balls
Pre-Conditions: Ball in motion OR stationary	
Input: Random motion along table	
Expected Results: EE travels directly over balls and does not make contact	
Post-Conditions: None	

Table 11: Ball Avoidance

Test ID: 1.1 Table V	Table Visibility	
Description: The amount of table visible is approximated.		
Pass/Fail Condition: This test is passed if players are able to see 100% table setup upon their turn.		
Pre-Conditions: Machine is in a position where it is ready for a "Take a Shot" command.		
Input: Percentage visibility of the table.		
Expected Results: Player can see 100% of the table without excessive effort or movement. Actual Results:		
Post-Conditions: None.		

Table 12: Table Visibility

Test ID: 2.1 System Obstruction			
Description: The machine will be placed in positions which make it as difficult as possible to take a shot. The difficult of the shot will then be determined.			
Pass/Fail Condition: This test is passed if the design of the machine allows users to take any shot they would normal be able to make.			
Pre-Conditions: The machine and balls should be setup in a way that makes a shot as difficult as possible.			
Input: Difficulty of shot.			
Expected Results: Player is able to make their shot with no more than a low degree of difficulty relative to the shot difficulty without the machine.	Actual Results:		
Post-Conditions: None			

Table 13: System Obstruction

Test ID: 1.3 System	Status: TBT		
Description: The components of the machine will be weighed and those weights will be added together to get the to weight.			
Pass/Fail Condition: This test is passed if the weight of the machine is less than 250 lbs.			
Pre-Conditions: None.			
Input: Weights of all components used.			
Expected Results: Machine weighs less than 250 lbs.	Actual Results:		
Post-Conditions: None.			

Table 14: System Weight

Test ID: 1.4 Rigidity of Machine Body		Status: TBT
Description:		
Pass/Fail Condition:		
Pre-Conditions: None.		
Input: The impulse from the strongest shot on the machine	in multiple locations and directions.	
Expected Results: The machine body should not suffer deformation greater than Actual Results:		
Post-Conditions: The machine body should return to its initial state.		

Table 15: Rigidity of Machine Body

Test ID: 1.1	Transformer Stability	Status: TBT
Description: Machine will move a checked for stability.	around the table as sharply as possible in typical execution	on and the transformer will be
Pass/Fail Condition: This test is	passed if the transformer remains sturdy and secured.	
Pre-Conditions: None.		
Input: Quickest movement along	the table in each direction.	
Expected Results: The transform sition.	ner remains secured in po- Actual Results:	
Post-Conditions: None.		

Table 16: Transformer Stability

Test ID: 6.1 User Proximity Safety		Status: TBT
Description: The machine will move to the furthest points it	can reach and the distance from the table will	be measured.
Pass/Fail Condition: This test is passed if the machine is never further than 2 ft away from the table.		
Pre-Conditions: None.		
Input: End-effector moved in various locations to test the ex	treme distances it can reach.	
Expected Results: Mechanism extends less than 2ft from the perimeter of the table at all times.	Actual Results:	
Post-Conditions: None.		

Table 17: User Proximity Safety

Test ID: 7.1	Shut Down Bu	tton Locations	Status: TBT
Description: The distance f	from pinch points to a stop button	n is measured.	
Pass/Fail Condition: This t of pinch points.	test is passed if there are shut dow	n buttons located within the smalles	st reach of a typical adult
Pre-Conditions: None.			
Input: The distance from p	oinch points when the system is m	noved to various positions.	
_	wn buttons are always less than cal adult from pinch points.	Actual Results:	
Post-Conditions: None.			

Table 18: Shut Down Buttons

Test ID: 14.1	User Input to Arduino		Status: TBT
Description: User applies input, then t	the Arduino indicates	a message was received	
Pass/Fail Condition: Arduino output to console correct desired status			
Pre-Conditions: None			
Input: User pressed input button			
Expected Results: Related console out cel, or move, depending on the button	_	Actual Results:	
Post-Conditions: None			

Table 19: User Input to Arduino

4 Electrical System

Test ID: 10.1 Current Physical State: X-Rail		Status: TBT	
Description: Verify that	the system can detect the machine's	s current physical state at certain locations	along the x-rail.
Pass/Fail Condition: This condition is passed if both sensors are triggered.			
Pre-Conditions: None			
Input: Attempt to move system along the x-rail to the lower-limit position then the upper limit position.			
1 -	sensors indicate that the system is t positions and motion is stopped.	Actual Results:	
Post-Conditions: None			

Table 20: Current Physical State: X-Rail

Test ID: 10.2 Current Physical State: Y-Rail			Status: TBT
Description: Verify that the syste	em can detect the machine's	current physical state at certain	locations along the y-rail.
Pass/Fail Condition: This condition is passed if both sensors are triggered.			
Pre-Conditions: None			
Input: Attempt to move system a	along the y-rail to the lower-	-limit position then the upper lim	nit position.
Expected Results: Y-rail sensors in lower-limit/upper-limit positio	v	Actual Results:	
Post-Conditions: None	,		

Table 21: Current Physical State: Y-Rail

Test ID: 10.3	Current Physical	State: Rotation	Status: TBT
Description: Verify that the	he system can detect the machine's	s current physical state at certain angular p	positions.
Pass/Fail Condition: This in to within 0.3 degrees.	condition is passed if the sensor ind	licates that the system in the position the m	nachine is actually
Pre-Conditions: None			
Input: Rotate the end-effe	ector to various set positions.		
Expected Results: Sensor reference position.	indicates that the system is in	Actual Results:	
Post-Conditions: None			

Table 22: Current Physical State: Rotation

Test ID: 10.4	Current Physical State: End-Effector	Status: TBT
Description: Verify that effector's range of motion	t the system can detect the machine's current physical state at certain loca on.	ations along the end-
Pass/Fail Condition: The millimetres.	his condition is passed if the sensors indicate that the system in in the targ	get position within 2
Pre-Conditions: None		
Input: Predetermined ta	arget locations	
Expected Results: End- end-effector is in the tar	l-effector sensors indicate that the Actual Results: get location.	
Post-Conditions: None		

Table 23: Current Physical State: End-Effector

Test ID: 1.2 Ch	eck for Exposed Circuitry	Status: TBT
Description: Circuitry will be inspected to er	sure none is exposed.	
Pass/Fail Condition: This test is passed if no	circuitry is exposed.	
Pre-Conditions: None.		
Input: Result of wire inspection.		
Expected Results: No exposed circuitry.	Actual Results:	
Post-Conditions: None.		

Table 24: Check for Exposed Circuitry

Test ID: 3.1	Sensitive Component Iso	lation from High Voltage	Status: TBT
Description: The volta	ge near sensitive components will be r	neasured to ensure they are at safe levels.	
Pass/Fail Condition: This test is passed if wires connected to sensitive components fall within their maximum parameters as specified by the device.			ım parameters
Pre-Conditions: None.			
Input: Inspect wires co	onnected to electrical equipment stated	d above.	
Expected Results: All safely high voltage.	l components are isolated from un-	Actual Results:	
Post-Conditions: None.			

Table 25: Sensitive Component Isolation from High Voltage

Test ID: 5.1 Volt	tage Regulation	Status: TBT
Description: The circuit to the μ C will be provided very Pass/Fail Condition: This test is passed if the outprequirements.	ŭ .	nin the required μC voltage
Pre-Conditions: None.		
Input: Reading of voltage fed into μ C using a multir	neter.	
Expected Results: Voltage is within 12 V DC.	Actual Results:	
Post-Conditions: None.		

Table 26: Voltage Regulation

Test ID: 4.1	Circuit Breakers	Status: TBT
Description: High voltage wil	ll be applied to components to ensure that the circuit b	oreakers perform as expected.
Pass/Fail Condition: This test applied.	st is passed if the circuits to all high voltage component	ts are broken before unsafe voltage is
Pre-Conditions: None.		
Input: Sufficiently hight volta	age.	
Expected Results: All circuit ken.	s with unsafe voltages are bro- Actual Results:	
Post-Conditions: None.		

Table 27: Circuit Breakers

5 Software System

The software system is comprised of four main components: a control system running on an Arduino microcontroller, an automated image capture application running on an Android smartphone, as well a visual recognition program and smart shot selection program running on a PC. On top of the typical suite of unit tests to verify correctness of methods, rigorous system testing will also be crucial to adequately test this system.

5.1 Unit Tests

This section will provide a plethora of test cases which aim to prove correctness of the program. Each individual class will be tested in order to make finding specific test cases easier.

Test ID: 18.1 AC/DC C	Converter	Status: TBT
Description: Verify that the transformer converts AC to DC	at the appropriate voltage.	
Pass/Fail Condition: This condition is passed if the output voltage is a DC voltage within		
Pre-Conditions: None		
Input: Multimeter output voltage readings from the transfor	mer.	
Expected Results: The output voltage is a DC voltage Actual Results:		
within Post-Conditions: None		

Table 28: AC/DC Converter

Test ID: n	Modul	e: Ball	Status: TBT
	Ball Constructo	or Good Inputs	
Pass/Fail Conditions: This test	t is passed if all the fields inside	de of Ball are correctly initialized.	
Pre-Conditions: None			
Input: 1, 0.7, 0			
Expected Results: A new baccoordinate 0.7, and the value 0	. •	Actual Results:	
Post-Conditions: A new Ball of	bject should be available.		

Table 29: Ball Constructor Good Inputs

Ball Tests

InferenceEngine Tests

Test ID: n	Module	e: Ball	Status: TBT
	Ball Constru	ctor Large X	
Pass/Fail Conditions: This tes	t is passed if an IllegalArgume	entException is thrown	
Pre-Conditions: None			
Input: 1.87658, 0.7, 0			
Expected Results: An Illegal Athrown.	argumentException has been	Actual Results:	
Post-Conditions: There should	not have been a Ball created.		

Table 30: Ball Constructor Large X

Test ID: n	Module: Ball	Status: TBT
	Ball Constructor Large Y	
Pass/Fail Conditions: This	test is passed if an IllegalArgumentException is thrown	
Pre-Conditions: None		
Input: 1, 0.94958, 0		
Expected Results: An Illeg thrown.	galArgumentException has been Actual Results:	
Post-Conditions: There sho	ould not have been a Ball created.	

Table 31: Ball Constructor Large Y

Test ID: n	Module: Ball	Status: TBT
	Ball Constructor Small X	
Pass/Fail Conditions: This t	test is passed if an IllegalArgumentException is thrown	
Pre-Conditions: None		
Input: -1.001, 0.7, 0		
Expected Results: An Illegathrown.	alArgumentException has been Actual Results:	
Post-Conditions: There show	uld not have been a Ball created.	

Table 32: Ball Constructor Small X

Test ID: n	Modul	e: Ball	Status: TBT
	Ball Constru	ctor Small Y	
Pass/Fail Conditions: This test is passed	l if an IllegalArgume	entException is thrown	
Pre-Conditions: None			
Input: 1, -1.001, 0			
Expected Results: An IllegalArgumentE	Exception has been	Actual Results:	
thrown.			
Post-Conditions: There should not have	been a Ball created		

Table 33: Ball Constructor Small Y

Test ID: n	Module: Ball	Status: TBT
	Ball Constructor Small Value	
Pass/Fail Conditions: This	test is passed if an IllegalArgumentException is thrown	
Pre-Conditions: None		
Input: 1, 0.7, -1		
Expected Results: An Illeg thrown.	galArgumentException has been Actual Results:	
Post-Conditions: There sho	ould not have been a Ball created.	

Table 34: Ball Constructor Small Value

Test ID: n	Module	e: Ball	Status: TBT
	Ball Construct	or Large Value	
Pass/Fail Conditions: Th	is test is passed if an IllegalArgume	entException is thrown.	
Pre-Conditions: None			
Input: 1, 0.7, 16			
Expected Results: An Ill thrown.	egalArgumentException has been	Actual Results:	
Post-Conditions: There sl	hould not have been a Ball created.		

Table 35: Ball Constructor Large Value

Test ID: n Module: InferenceEngine Status: TBT

Updating Table State

Pass/Fail Conditions: This test is passed if all post-conditions are met.

Pre-Conditions: None

Input: A 16-by-2 array of doubles that are valid positions, BallType.STRIPES

Expected Results: None Actual Results: None

Post-Conditions:

1. Stored BallType is BallType.STRIPES.

2. The stored positions array is the same as the one passed in.

3. The stored best shot is null.

4. The stored table state reflects the positions passed in.

Table 36: Updating Table State

Test ID: n Module: InferenceEngine Status: TBT

Selecting an Optimal Shot

Pass/Fail Conditions: This test is passed if a reasonable Shot is returned.

Pre-Conditions: The current table state is not null and the current ball type is not null or BallType.CUE.

Input: None

Expected Results: A reasonable Shot (no bank shots, shooting the right ball, valid x-/y-coordinates).

Post-Conditions: The best shot for the current table state is stored.

Table 37: Selecting an Optimal Shot

Test ID: n Module: PCCommunicator Status: TBT

Read Valid Table State from File

Pass/Fail Conditions: This test is passed if the output matches the data in the text file.

Pre-Conditions: None.

Input: A text file with 16 ball positions

Expected Results: The 16 ball positions stored in the text | Actual Results:

file.

Post-Conditions: None.

Table 38: Read Valid Table State from File

Test ID: n Module:	PCCommunicator	Status: TBT	
Read Table State	e from Non-Existent File		
Pass/Fail Conditions: This test is passed if a FileNotFoundException is thrown.			
Pre-Conditions: None.			
Input: None.			
Expected Results: A FileNotFoundException is thrown	. Actual Results:		
Post-Conditions: None.			

Table 39: Read Table State from Non-Existent File

Test ID: n	Module: PCC	Communicator	Status: TBT
	Read Table State from	File with Invalid Data	
Pass/Fail Conditions: This test is passed if an InputMismatchException is thrown.			
Pre-Conditions: None.			
Input: A file containing the text "Bad data".			
Expected Results: An InputMismatchException is thrown. Actual Results:			
Post-Conditions: None.			

Table 40: Read Table State from File with Invalid Data

PCCommunicator Tests

Shot Tests

Test ID: n	Module: PCCommunicator	Status: TBT
	Initiating the VR Program	
Pass/Fail Conditions: The	test is passed if the VR Program has been run.	
Pre-Conditions: None.		
Input: None.		
Expected Results: Programbeen updated.	n is run and TableState.csv has Actual Results:	
Post-Conditions: TableState.csv contains the results of the VR Program.		

Table 41: Initiating the VR Program

Test ID: n	Module	e: Shot	Status: TBT
Shot Constructor Good Inputs			
Pass/Fail Conditions: This tes	st is passed if the Shot is succe	ssfully created and stores the correct infe	ormation.
Pre-Conditions: None			
Input: 1, 0.5, 3.5, 1			
Expected Results: A new Shot y-coordinate of 0.5, an angle of	· · · · · · · · · · · · · · · · · · ·	Actual Results:	
Post-Conditions: Shot has been	en created.

5.1.2 PC VR Program

5.1.3 μ C Program

Certain functions of this specific program (such as functionality of sensors) are tested in the electrical section and so will not be tested again here.

Test ID: n	Module: T	ableState	Status: TBT
	TableState Constructo	r Elements Too Large	
Pass/Fail Conditions: Th	is test is passed if the TableState is	not created.	
Pre-Conditions: None			
Input: A 16-by-3 array of	doubles		
	egalArgumentException has been	Actual Results:	
thrown.			
Post-Conditions: TableSta	ate has not been created.		

Table 62: TableState Constructor Elements Too Large

Test ID: n Module: TableState State		Status: TBT	
TableState Deep Copy			
Pass/Fail Conditions: This	test is passed if the array of Balls	returned have the same values bu	at are not the same Objects.
Pre-Conditions: A TableState exists in memory.			
Input: None.			
Expected Results: An arrapositions as those in the Ta	y of Balls that have the same bleState.	Actual Results:	
Post-Conditions: None.			

Table 63: TableState Deep Copy

Test ID: n	Module:	System	Status: TBT		
	Aligned Shot				
Pass/Fail Conditions: This test is passed if the target ball is sunk by the machine 50% of the time and the shot should be made within 90 seconds (as per the <i>Summary and Goals</i> document).					
Pre-Conditions: Machine must not be currently moving or taking a shot. There are three balls on the table, the cue ball, the target ball, and the eight ball. The cue ball, target ball, and one of the pockets are aligned near perfectly along an imaginary line. The eight ball is not in a position to interfere with motion of the balls along that line. Input: Take Shot button pressed.					
Expected Results: Only the target ball should be sunk.					
Post-Conditions: The eight ball should remain on the table. The target ball should be sunk. There are no requirements for the cue ball, but bonus points if it remains on the table.					

Table 64: Aligned Shot

Test ID: n Module: System Status: TBT

Shot Cancelled Before Motion

Pass/Fail Conditions: This test is passed if the machine does not move.

Pre-Conditions: None.

Input:

Take Shot button pressed,
Then Cancel button pressed before machine moves.

Expected Results: The machine should cancel the instruction and not move.

Post-Conditions: The machine should not have moved or be moving.

Table 66: Shot Cancelled Before Motion

5.2 System Tests

Test ID: n	Module	System	Status: TBT
	Shot Cancelled	During Motion	
Pass/Fail Conditions: Thi	is test is passed if the machine cea	ses movement within 2 seconds.	
Pre-Conditions: None.			
•	sed while machine is moving.	Actual Results:	
-	chine should not be moving	Actual Results.	

Table 67: Shot Cancelled During Motion

Test ID: n	Module:	System	Status: TBT	
	Move Request (To Z	Zero X-Coordinate)		
Pass/Fail Conditions: The machine moves to the zero x-coordinate within 20 seconds.				
Pre-Conditions: Machine's y-rail is located closer to the large x-coordinate.				
Input: Move button pressed Expected Results: The machine should move to the zero Actual Results:				
x-coordinate of the tabl	e.			
Post-Conditions: The machine should be located at the zero x-coordinate.				

Table 68: Move Request (To Zero X-Coordinate)

Test ID: n	Module:	System	Status: TBT	
Move Request (To Largest X-Coordinate)				
Pass/Fail Conditions: The machine moves to the largest x-coordinate within 20 seconds.				
Pre-Conditions: Machine's y-rail is located closer to the zero x-coordinate.				
Input: Move button pressed				
Expected Results: The x-coordinate of the tal	e machine should move to the largest ble.	Actual Results:		
Post-Conditions: The machine should be located at the largest x-coordinate.				

Table 69: Move Request (To Largest X-Coordinate)

Test ID: 2.1	Shot Power Modificatio	n Status: TBT	
_	ot be able to modify system to perform unsafe. The test will attempt to make the system do ju	© 1	
Pass/Fail Condition: This test is passed if the user cannot modify the power the shot beyond system parameters.			
Pre-Conditions: None.			
Input: User attemtpts to tal	ke a shot with power outside of system paramet	ers.	
Expected Results: System do of force.	bes not take a shot at that level Actual Result	ts:	
Post-Conditions: None.			

Table 70: Shot Power Modification

Test ID: n Module: System			Status: TBT	
Check For Political Correctness				
Pass/Fail Conditions: All interviewees agree that there are no direct references to any religious or political groups.				
Pre-Conditions: None.				
Input: 20 colleagues will be asked to give their opinion on whether the system created has no direct reference to any religious or political groups.				
Expected Results: Colleagues decide that there are no direct references to any religious or political groups. Actual Results:				
Post-Conditions: None.	• • •	1		

Table 71: Check For Legality and Political Correctness

6 Summary of Results

This section will be completed once the first version of the system is completed and all tests can be run.
