Table 1: Revision History

### 1 Introduction

This document will provide a specification of a test plan for an automated pool playing robot and report on the results of that plan.

#### 1.1 Overview

This document breaks down the required testing for each domain of the system. It begins with the hardware aspect, then moves to the electrical side and then finishes with software. Each section will go into further detail to describe each test case. Lastly, a summary of the results of testing will be provided to conclude the document.

#### 1.2 Purpose

The aim of this document is to illuminate any design flaws, software bugs, or other issues in the system. Once these issues are discovered, the engineering team will be able to work on eliminating them or minimizing their frequency and consequences.

### 1.3 Naming Conventions & Definitions

This section outlines the various definitions, acronyms and abbreviations that will be used throughout this document in order to familiarize the reader prior to reading.

#### 1.3.1 Definitions

Table 2 lists the definitions used in this document. The definitions given below are specific to this document and may not be identical to definitions of these terms in common use. The purpose of this section is to assist the user in understanding the requirements for the system.

Table 2: Definitions

Term	Meaning
X-axis	Distance along the length of the pool
	table
Y-axis	Distance across the width of the pool
	table
Z-axis	Height above the pool table
End-effector	The end of the arm that will strike the
	cue ball
$\theta$	Rotational angle of end-effector
Cue	End-effector
Personal Computer	A laptop that will be used to run the
	more involved computational tasks such
	as visual recognition and the shot selec-
	tion algorithm
Camera	Some form of image capture device (e.g.
	a digital camera, smartphone with a
<b>m</b> 11 0	camera, etc.)
Table State	The current positions of all the balls on
	the table
Entity	Classes that have a state, behaviour
	and identity (e.g. Book, Car, Person,
D. I	etc.)
Boundary	Classes that interact with users or ex-
	ternal systems
Double	Double-precision floating point num-
	bers

#### 1.3.2 Acronyms & Abbreviations

Table 3 lists the acronyms and abbreviations used in this document.

Table 3: Acronyms and Abbreviations

Acronym/Abbreviation	Meaning
VR	Visual Recognition
PC	Personal Computer
$\mu C$	Micro-Controller
CRC	Class Responsibility Collaboration
TBT	To Be Tested

## 2 Traceability Matrix

The following traceability matrices will demonstrate that the tests to be performed prove that each of the specified requirements have been tested.

Table 7: Non-Functional Requirements Traceability Matrix

Test ID: 1.1	Synchronous M	otion in X Rail	Status: TBT
Description: Verify that Y while loaded	K-Rails can synchronously move to	the same location at the same speed withou	t getting stuck
Pass/Fail Condition: If ra	il moves adequately and quickly as	expected	
Pre-Conditions: None			
Input: Location along x-d	irection (i.e. 2000 steps)		
1	and consistent motion along axis owed by an immediate stop	Actual Results:	
Post-Conditions: Rails are	e stationary with no slip.		

Table 8: Synchronous Motion in X Rail

Test ID: 1.2	Motion is	n Y Rail	Status: TBT
Description: Verify that Y-Rail ca	n move to a location withou	it getting stuck while loaded	
Pass/Fail Condition: If rail move	s adequately and quickly as	expected	
Pre-Conditions: None			
Input: Location along y-direction	1		
Expected Results: Smooth and countil position is met. Followed by	9	Actual Results:	
Post-Conditions: Rail is stationar	ry with no slip.		

Table 9: Motion in Y Rail

# 3 Mechanical Components

Test ID: 1.3 End-Effecto	r Orientation	Status: TBT
Description: Verify that EE-Base Motor can orient to a spe	cific angle without getting stuck while loaded	
Pass/Fail Condition: If motor turns adequately and quickly as expected to correct angle		
Pre-Conditions: None		
Input: Angle of orientation with respect to the x-axis		
Expected Results: Smooth and consistent motion until orientation is met. Followed by an immediate stop	Actual Results:	
Post-Conditions: Motor is stationary.		

Table 10: End-Effector Orientation

Test ID: 1.4	Shooting Mechan	nism Orientation	Status: TBT
Description: EE is positione	ed correctly and waiting comman	d to power piston	
Pass/Fail Condition: Piston is settled at correct oreintation, awaiting command to actuate piston			
Pre-Conditions: Motors orient piston to proper orentation			
Input: Position and orientation components sent to Arduino			
Expected Results: System moves to desired location and Actual Results: waits for piston signal			
Post-Conditions: Piston can be safely actauted and strike cue ball			

Table 11: Shooting Mechanism Orientation

Test ID: 1.5 Perimete	r Coverage	Status: TBT
Description: EE will be moved around the table to ensure	that it is able to reach all locations and orienta	tions
Pass/Fail Condition: EE is capable of completing a full trip	around the perimeter without stops	
Pre-Conditions: None		
Input: Motion command from Arduino		
Expected Results: EE will travel around perimeter of table. Inspection that its location is sufficient for shot-taking is required.		
Post-Conditions: System awaits next command.		

Table 12: Perimeter Coverage

Test ID: 1.6 Ball Avoidance	Status: TBT
Description: As the EE is moving around the table it much avoid the balls to not interfere with gamepla	y
Pass/Fail Condition: Able to move randomly around table without moving rolling or stationary balls	
Pre-Conditions: Ball in motion OR stationary	
Input: Random motion along table	
Expected Results: EE travels directly over balls and does not make contact  Actual Results:	
Post-Conditions: None	

Table 13: Ball Avoidance

Test ID: 1.7 Table V	isibility	Status: TBT
Description: The amount of table visible is approximated.		
Pass/Fail Condition: This test is passed if players are able to see 100% table setup upon their turn.		
Pre-Conditions: Machine is in a position where it is ready for a "Take a Shot" command.		
Input: Percentage visibility of the table.		
Expected Results: Player can see 100% of the table without excessive effort or movement.  Actual Results:		
Post-Conditions: None.		

Table 14: Table Visibility

Test ID: 1.8 System O	bstruction Status: TBT	
Description: The machine will be placed in positions which make it as difficult as possible to take a shot. The difficult of the shot will then be determined.		
Pass/Fail Condition: This test is passed if the design of the machine allows users to take any shot they would normally be able to make.		
Pre-Conditions: The machine and balls should be setup in a way that makes a shot as difficult as possible.		
Input: Difficulty of shot.		
Expected Results: Player is able to make their shot with no more than a low degree of difficulty relative to the shot difficulty without the machine.  Actual Results:		
Post-Conditions: None.		

Table 15: System Obstruction

Test ID: 1.9 Syste	System Weight	
Description: The components of the machine will be we weight.	ghed and those weights will be added together to	o get the total
Pass/Fail Condition: This test is passed if the weight of the machine is less than 250 lbs.		
Pre-Conditions: None.		
Input: Weights of all components used.		
Expected Results: Machine weighs less than 250 lbs.	Actual Results:	
Post-Conditions: None.		

Table 16: System Weight

Test ID: 1.10	Rigidity of M	Tachine Body	Status: TBT
Description:			
Pass/Fail Condition:			
Pre-Conditions: None.			
Input: The impulse from the strongest shot on the machine in multiple locations and directions.			
Expected Results: The mach formation greater than	nine body should not suffer de-	Actual Results:	
Post-Conditions: The machine body should return to its initial state.			

Table 17: Rigidity of Machine Body

Test ID: 1.11	ransformer Stability	Status: TBT
Description: Machine will move around the table checked for stability.	e as sharply as possible in typical execution a	and the transformer will be
Pass/Fail Condition: This test is passed if the transformer remains sturdy and secured.		
Pre-Conditions: None.		
Input: Quickest movement along the table in each	ch direction.	
Expected Results: The transformer remains secusition.	ured in po- Actual Results:	
Post-Conditions: None.		

Table 18: Transformer Stability

Test ID: 1.12 User Proximity Safety		Status: TBT
Description: The machine will move to the furthest points it	can reach and the distance from the table will	be measured.
Pass/Fail Condition: This test is passed if the machine is never further than 2 ft away from the table.		
Pre-Conditions: None.		
Input: End-effector moved in various locations to test the extreme distances it can reach.		
Expected Results: Mechanism extends less than 2ft from	Actual Results:	
the perimeter of the table at all times.  Post-Conditions: None.	<u> </u>	

Table 19: User Proximity Safety

Test ID: 1.13	Shut Down Bu	tton Locations	Status: TBT
Description: The distance	from pinch points to a stop buttor	n is measured.	
Pass/Fail Condition: This test is passed if there are shut down buttons located within the smallest reach of a typical adul of pinch points.			lest reach of a typical adult
Pre-Conditions: None.			
Input: The distance from pinch points when the system is moved to various positions.			
_	own buttons are always less than pical adult from pinch points.	Actual Results:	
Post-Conditions: None.			

Table 20: Shut Down Buttons

Test ID: 1.14 Striking	Force - Strong Status: TBT
Description: Ensure shot is strong enough so that the cu	e ball can reach the whole table with sufficient force
Pass/Fail Condition: At maximum strength the cue ball can cover the length of the table and return to half after hitting a bank	
Pre-Conditions: Cue ball placed along one maximum x position	
Input: Maximum strength shot	
Expected Results: Cue ball rolls across long edge of tab reflects of the bank and returns to half	le, Actual Results:
Post-Conditions: Balls are stationary and Shooting mechanism is retracted	

Table 21: Striking Force - Strong

Test ID: 1.15	Striking Fo	orce - Soft	Status: TBT	
Description: Ensure shot is so	Description: Ensure shot is soft enough so that the cue ball can reach nearby balls with control			
Pass/Fail Condition: At minimum/low strength the cue ball can lightly strike a nearby ball (within 20 cm) while moving no more than 20 cm after the hit			20 cm) while moving	
Pre-Conditions: Cue ball placed within 20 cm of another ball				
Input: Minimum stength shot				
Expected Results: Cue ball r contact and quickly comes to	olls towards other ball, makes a stop	Actual Results:		
Post-Conditions: Balls are stationary and Shooting mechanism is retracted				

Table 22: Striking Force - Soft

# 4 Electrical System

Test ID: 1.16 Sufficient Acceleration	and Stepping Consistency Status: TBT		
Description: At maximum loading capacity the system c quickly enough	an accelerate to a terminal speed at which the EE is moved		
Pass/Fail Condition: While the physical construction is finished the system will be told to move long distances several times to ensure repeatability and consistency in acceleration			
Pre-Conditions: System is stationary			
Input: Move EE between opposite corners multiple times (x10 cycles)			
Expected Results: After completion the EE should return to its original location within a couple of steps	Actual Results:		
Post-Conditions: Balls are stationary and Shooting mechanism is retracted			

Table 23: Sufficient Acceleration and Stepping Consistency

Test ID: 2.1 User Input	to Arduino	Status: TBT	
Description: User applies input, then the Arduino indicates	a message was received		
Pass/Fail Condition: Arduino output to console correct desired status			
Pre-Conditions: None			
Input: User pressed input button			
Expected Results: Related console output: make shot, can-	Actual Results:		
cel, or move, depending on the button pressed			
Post-Conditions: None			

Table 24: User Input to Arduino

Test ID: 2.2	Current Physical S	State: X-Rail	Status: TBT
Description: Verify that the sy	stem can detect the machine's cu	urrent physical state at certain loca	ations along the x-rail.
Pass/Fail Condition: This condition is passed if both sensors are triggered.			
Pre-Conditions: None			
Input: Attempt to move system	n along the x-rail to the lower-lim	nit position then the upper limit p	osition.
Expected Results: X-rail senso in lower-limit/upper-limit posi	v	ctual Results:	
Post-Conditions: None	nons and motion is stopped.		

Table 25: Current Physical State: X-Rail

Test ID: 2.3 Current Phy	sical State: Y-Rail Status: TBT		
Description: Verify that the system can detect the mach	ne's current physical state at certain locations along the y-rail.		
Pass/Fail Condition: This condition is passed if both sensors are triggered.			
Pre-Conditions: None			
Input: Attempt to move system along the y-rail to the lower-limit position then the upper limit position.			
Expected Results: Y-rail sensors indicate that the system			
in lower-limit/upper-limit positions and motion is stopped	d.		
Post-Conditions: None			

Table 26: Current Physical State: Y-Rail

Test ID: 2.4	Current Physical State: Rotation	Status: TBT
Description: Verify that	at the system can detect the machine's current physical state at certain angula	ar positions.
Pass/Fail Condition: This condition is passed if the sensor indicates that the system in the position the machine is actually in to within 0.3 degrees.		
Pre-Conditions: None		
Input: Rotate the end-e	effector to various set positions.	
Expected Results: Sen reference position.	nsor indicates that the system is in Actual Results:	
Post-Conditions: None		

Table 27: Current Physical State: Rotation

Test ID: 2.5	rent Physical S	State: End-Effector	Status: TBT
Description: Verify that the system car effector's range of motion.	detect the machine	e's current physical state at certain loc	eations along the end-
Pass/Fail Condition: This condition is millimetres.	passed if the sensors	s indicate that the system in in the tar	rget position within 2
Pre-Conditions: None			
Input: Predetermined target locations			
Expected Results: End-effector sensors end-effector is in the target location.	s indicate that the	Actual Results:	
Post-Conditions: None			

Table 28: Current Physical State: End-Effector

Test ID: 2.6	Check for Exposed Circuitry	Status: TBT	
Description: Circuitry will be inspected to ensure none is exposed.			
Pass/Fail Condition: This test is passed if no circuitry is exposed.			
Pre-Conditions: None.			
Input: Result of wire inspection.			
Expected Results: No exposed circuitry.	Actual Results:		
Post-Conditions: None.			

Table 29: Check for Exposed Circuitry

Test ID: 2.7	Sensitive Component Iso	lation from High Voltage	Status: TBT
Description: The vo	ltage near sensitive components will be r	neasured to ensure they are at safe levels.	
Pass/Fail Condition: This test is passed if wires connected to sensitive components fall within their maximum parameters as specified by the device.			um parameters
Pre-Conditions: No	ne.		
Input: Inspect wires	s connected to electrical equipment stated	d above.	
Expected Results: safely high voltage.	All components are isolated from un-	Actual Results:	
Post-Conditions: No	one.		

Table 30: Sensitive Component Isolation from High Voltage

## 5 Software System

The software system is comprised of four main components: a control system running on an Arduino microcontroller, an automated image capture application running on an Android smartphone, as well a visual recognition program and smart shot selection program running on a PC. On top of the typical suite of unit tests to verify correctness of methods, rigorous system testing will also be crucial to adequately test this system.

Test ID: 2.8	Voltage Regulation		
Description: The circuit to the $\mu$ C will be provide	d various voltages and t.		
Pass/Fail Condition: This test is passed if the output voltage from the transformer is within the required $\mu$ C voltage requirements.			
Pre-Conditions: None.			
Input: Reading of voltage fed into $\mu C$ using a mul	timeter.		
Expected Results: Voltage is within 12 V DC.	Actual Results:		
Post-Conditions: None.			

Table 31: Voltage Regulation

Test ID: 2.9	Circuit Breakers	Status: TBT
Description: High voltage will be ap	pplied to components to ensure that the circuit breakers	s perform as expected.
Pass/Fail Condition: This test is passed if the circuits to all high voltage components are broken before unsafe voltage is applied.		
Pre-Conditions: None.		
Input: Sufficiently hight voltage.		
Expected Results: All circuits with ken.	unsafe voltages are bro- Actual Results:	
Post-Conditions: None.		

Table 32: Circuit Breakers

Test ID: 2.10	AC/DC (	Converter	Status: TBT	
Description: Verify	Description: Verify that the transformer converts AC to DC at the appropriate voltage.			
Pass/Fail Condition	Pass/Fail Condition: This condition is passed if the output voltage is a DC voltage within			
Pre-Conditions: No	ne			
Input: Multimeter of	output voltage readings from the transfor	mer.		
Expected Results: within	The output voltage is a DC voltage	Actual Results:		
Post-Conditions: No	one			

Table 33: AC/DC Converter

Test ID: 3.1.1	Module: Ball	Status: TBT
	Ball Constructor Good Inputs	
Pass/Fail Conditions: This tes	et is passed if all the fields inside of Ball are correctly initialized	1.
Pre-Conditions: None		
Input: 1, 0.7, 0		
Expected Results: A new be coordinate 0.7, and the value 0	. •	
Post-Conditions: A new Ball o	object should be available.	

Table 34: Ball Constructor Good Inputs

Test ID: 3.1.2	Module: Ball	Status: TBT
	Ball Constructor Large X	
Pass/Fail Conditions: This te	est is passed if an IllegalArgumentException is thrown	
Pre-Conditions: None		
Input: 1.87658, 0.7, 0		
Expected Results: An Illegal thrown.	lArgumentException has been   Actual Results:	
Post-Conditions: There should	ld not have been a Ball created.	

Table 35: Ball Constructor Large X

### 5.1 Unit Tests

This section will provide a plethora of test cases which aim to prove correctness of the program. Each individual class will be tested in order to make finding specific test cases easier.

### 5.1.1 PC Controller Program

#### **Ball Tests**

Test ID: 3.1.3	Module: Ball	Status: TBT
	Ball Constructor Large Y	
Pass/Fail Conditions: This test	t is passed if an IllegalArgumentException is thrown	
Pre-Conditions: None		
Input: 1, 0.94958, 0		
Expected Results: An IllegalA thrown.	rgumentException has been Actual Results:	
Post-Conditions: There should	not have been a Ball created.	

Table 36: Ball Constructor Large Y

Test ID: 3.1.4	Module: Ball	Status: TBT
	Ball Constructor Small X	
Pass/Fail Conditions: This tes	st is passed if an IllegalArgumentException is thrown	
Pre-Conditions: None		
Input: -1.001, 0.7, 0		
Expected Results: An Illegal Athrown.	ArgumentException has been   Actual Results:	
Post-Conditions: There should	d not have been a Ball created.	

Table 37: Ball Constructor Small X

Test ID: 3.1.5 Module: Ball		Status: TBT
	Ball Constructor Small Y	
Pass/Fail Conditions: This test	is passed if an IllegalArgumentException is thrown	
Pre-Conditions: None		
Input: 1, -1.001, 0		
Expected Results: An IllegalAr thrown.	rgumentException has been   Actual Results:	
Post-Conditions: There should	not have been a Ball created.	

Table 38: Ball Constructor Small Y

Table 70: Test Title

### Aligned Shot

Pass/Fail Conditions: This test is passed if the target ball is sunk by the machine 50% of the time and the shot should be made within 90 seconds (as per the *Summary and Goals* document).

Pre-Conditions: Machine must not be currently moving or taking a shot. There are three balls on the table, the cue ball, the target ball, and the eight ball. The cue ball, target ball, and one of the pockets are aligned near perfectly along an imaginary line. The eight ball is not in a position to interfere with motion of the balls along that line.

Input: Take Shot button pressed.

Post-Conditions: The eight ball should remain on the table. The target ball should be sunk. There are no requirements for the cue ball, but bonus points if it remains on the table.

Table 71: Aligned Shot

Test ID: 4.2 Module: System Status: TBT

### Angled Shot

Pass/Fail Conditions: This test is passed if the target ball is sunk by the machine 50% of the time and the shot should be made within 90 seconds (as per the *Summary and Goals* document).

Pre-Conditions: Machine must not be currently moving or taking a shot. There are three balls on the table, the cue ball, the target ball, and the eight ball. There should be a shot that can be made with a modest angle that will sink the target ball. The eight ball is not in a position to interfere with expected motion of the balls.

Input: Take Shot button pressed.

Post-Conditions: The eight ball should remain on the table. The target ball should be sunk. There are no requirements for the cue ball, but bonus points if it remains on the table.

Table 72: Angled Shot

#### 5.1.3 $\mu$ C Program

Certain functions of this specific program (such as functionality of sensors) are tested in the electrical section and so will not be tested again here.

#### 5.2 System Tests

Test ID: 4.3	Module:	System	Status: TBT
Shot Cancelled Before Motion			
Pass/Fail Conditions: Th	is test is passed if the machine does	s not move.	
Pre-Conditions: None.			
Input:			
Take Shot button pressed	.,		
Then Cancel button pressed before machine moves.			
Expected Results: The m	nachine should cancel the instruc-	Actual Results:	
tion and not move.			
Post-Conditions: The machine should not have moved or be moving.			

Table 73: Shot Cancelled Before Motion

Test ID: 4.4	Module: System	Status: TBT	
Shot Cancelled During Motion			
Pass/Fail Conditions: This test is passed if the machine ceases movement within 2 seconds.			
Pre-Conditions: None.			
Input:  Take Shot button pressed, Then Cancel button pressed	while machine is moving.		
Expected Results: The mach	ine should cease movement. Actual F	Results:	
Post-Conditions: The machin	e should not be moving.		

Table 74: Shot Cancelled During Motion

Test ID: 4.5	Module:	System	Status: TBT
Move Request (To Zero X-Coordinate)			
Pass/Fail Conditions: T	The machine moves to the zero x-coor	dinate within 20 seconds.	
Pre-Conditions: Machine's y-rail is located closer to the large x-coordinate.			
Input:  Move button pressed  Expected Results: The machine should move to the zero   Actual Results:			
x-coordinate of the table		Tierdar Tiesdries.
