Table 1: Revision History

#### 1 Introduction

This document will provide a specification of a test plan for an automated pool playing robot and report on the results of that plan.

#### 1.1 Overview

This document breaks down the required testing for each domain of the system. It begins with the hardware aspect, then moves to the electrical side and then finishes with software. Each section will go into further detail to describe each test case. Lastly, a summary of the results of testing will be provided to conclude the document.

#### 1.2 Purpose

The aim of this document is to illuminate any design flaws, software bugs, or other issues in the system. Once these issues are discovered, the engineering team will be able to work on eliminating them or minimizing their frequency and consequences.

#### 1.3 Naming Conventions & Definitions

This section outlines the various definitions, acronyms and abbreviations that will be used throughout this document in order to familiarize the reader prior to reading.

#### 1.3.1 Definitions

Table 2 lists the definitions used in this document. The definitions given below are specific to this document and may not be identical to definitions of these terms in common use. The purpose of this section is to assist the user in understanding the requirements for the system.

Table 2: Definitions

Term	Meaning
X-axis	Distance along the length of the pool
	table
Y-axis	Distance across the width of the pool
	table
Z-axis	Height above the pool table
End-effector	The end of the arm that will strike the
	cue ball
$\theta$	Rotational angle of end-effector
Cue	End-effector
Personal Computer	A laptop that will be used to run the
	more involved computational tasks such
	as visual recognition and the shot selec-
	tion algorithm
Camera	Some form of image capture device (e.g.
	a digital camera, smartphone with a
<b>m</b> .11. 0	camera, etc.)
Table State	The current positions of all the balls on
	the table
Entity	Classes that have a state, behaviour
	and identity (e.g. Book, Car, Person,
D. I	etc.)
Boundary	Classes that interact with users or ex-
	ternal systems
Double	Double-precision floating point num-
	bers

#### 1.3.2 Acronyms & Abbreviations

Table 3 lists the acronyms and abbreviations used in this document.

Table 3: Acronyms and Abbreviations

Acronym/Abbreviation	Meaning
VR	Visual Recognition
PC	Personal Computer
$\mu C$	Micro-Controller
CRC	Class Responsibility Collaboration
TBT	To Be Tested

## 2 Traceability Matrix

The following traceability matrices will demonstrate that the tests to be performed prove that each of the specified requirements have been tested.

Table 7: Non-Functional Requirements Traceability Matrix

Test ID: 1.1	Synchronous M	otion in X Rail	Status: TBT
Description: Verify that Y while loaded	K-Rails can synchronously move to	the same location at the same speed withou	t getting stuck
Pass/Fail Condition: If ra	il moves adequately and quickly as	expected	
Pre-Conditions: None			
Input: Location along x-d	irection (i.e. 2000 steps)		
1	and consistent motion along axis owed by an immediate stop	Actual Results:	
Post-Conditions: Rails are	e stationary with no slip.		

Table 8: Synchronous Motion in X Rail

Test ID: 1.2	Motion is	n Y Rail	Status: TBT
Description: Verify that Y-Rail ca	n move to a location withou	it getting stuck while loaded	
Pass/Fail Condition: If rail move	s adequately and quickly as	expected	
Pre-Conditions: None			
Input: Location along y-direction	1		
Expected Results: Smooth and countil position is met. Followed by	9	Actual Results:	
Post-Conditions: Rail is stationar	ry with no slip.		

Table 9: Motion in Y Rail

# 3 Mechanical Components

Test ID: 1.3 End-Effecto	r Orientation	Status: TBT
Description: Verify that EE-Base Motor can orient to a spe	cific angle without getting stuck while loaded	
Pass/Fail Condition: If motor turns adequately and quickly	as expected to correct angle	
Pre-Conditions: None		
Input: Angle of orientation with respect to the x-axis		
Expected Results: Smooth and consistent motion until orientation is met. Followed by an immediate stop	Actual Results:	
Post-Conditions: Motor is stationary.		

Table 10: End-Effector Orientation

Test ID: 1.4	Shooting Mechan	nism Orientation	Status: TBT
Description: EE is positione	ed correctly and waiting comman	d to power piston	
Pass/Fail Condition: Piston is settled at correct oreintation, awaiting command to actuate piston			
Pre-Conditions: Motors orient piston to proper orentation			
Input: Position and oriental	tion components sent to Arduino		
Expected Results: System waits for piston signal	moves to desired location and	Actual Results:	
Post-Conditions: Piston can be safely actauted and strike cue ball			

Table 11: Shooting Mechanism Orientation

Test ID: 1.5 Perimeter	Coverage	Status: TBT
Description: EE will be moved around the table to ensure the	nat it is able to reach all locations and orientat	tions
Pass/Fail Condition: EE is capable of completing a full trip around the perimeter without stops		
Pre-Conditions: None		
Input: Motion command from Arduino		
Expected Results: EE will travel around perimeter of table. Inspection that its location is sufficient for shot-taking is required.	Actual Results:	
Post-Conditions: System awaits next command.		

Table 12: Perimeter Coverage

Test ID: 1.6 Ball Avoidance		Status: TBT
Description: As the EE is moving around the table it much	avoid the balls to not interfere with gameplay	
Pass/Fail Condition: Able to move randomly around table without moving rolling or stationary balls		
Pre-Conditions: Ball in motion OR stationary		
Input: Random motion along table		
Expected Results: EE travels directly over balls and does not make contact	Actual Results:	
Post-Conditions: None		

Table 13: Ball Avoidance

Test ID: 1.7 Table Visibility		Status: TBT
Description: The amount of table visible is approximated.		
Pass/Fail Condition: This test is passed if players are able to see 100% table setup upon their turn.		
Pre-Conditions: Machine is in a position where it is ready for a "Take a Shot" command.		
Input: Percentage visibility of the table.		
Expected Results: Player can see 100% of the table without  Actual Results: excessive effort or movement.		
Post-Conditions: None.		

Table 14: Table Visibility

Test ID: 1.8 System O	bstruction Status: TBT	
Description: The machine will be placed in positions which make it as difficult as possible to take a shot. The difficult of the shot will then be determined.		
Pass/Fail Condition: This test is passed if the design of the machine allows users to take any shot they would normall be able to make.		
Pre-Conditions: The machine and balls should be setup in a way that makes a shot as difficult as possible.		
Input: Difficulty of shot.		
Expected Results: Player is able to make their shot with no more than a low degree of difficulty relative to the shot difficulty without the machine.  Actual Results:		
Post-Conditions: None.		

Table 15: System Obstruction

Test ID: 1.9 Syst	System Weight		
Description: The components of the machine will be we weight.	eighed and those weights will be added together	to get the total	
Pass/Fail Condition: This test is passed if the weight of the machine is less than 250 lbs.			
Pre-Conditions: None.			
Input: Weights of all components used.			
Expected Results: Machine weighs less than 250 lbs.	Actual Results:		
Post-Conditions: None.	·		

Table 16: System Weight

Test ID: 1.10 Rigidity of	Machine Body	Status: TBT
Description:		
Pass/Fail Condition:		
Pre-Conditions: None.		
Input: The impulse from the strongest shot on the mach	ne in multiple locations and directions.	
Expected Results: The machine body should not suffer de- Actual Results:		
formation greater than	• 4: 1	
Post-Conditions: The machine body should return to its initial state.		

Table 17: Rigidity of Machine Body

Test ID: 1.11 Transfor	mer Stability Status: TBT
Description: Machine will move around the table as shar checked for stability.	bly as possible in typical execution and the transformer will be
Pass/Fail Condition: This test is passed if the transforme	r remains sturdy and secured.
Pre-Conditions: None.	
Input: Quickest movement along the table in each direction	on.
Expected Results: The transformer remains secured in position.	o- Actual Results:
Post-Conditions: None.	

Table 18: Transformer Stability

Test ID: 1.12 User Proximity Safety		Status: TBT	
Description: The machine will move to the furthest points it	can reach and the distance from the table will	be measured.	
Pass/Fail Condition: This test is passed if the machine is never further than 2 ft away from the table.			
Pre-Conditions: None.			
Input: End-effector moved in various locations to test the ex	etreme distances it can reach.		
Expected Results: Mechanism extends less than 2ft from the perimeter of the table at all times.	Actual Results:		
Post-Conditions: None.	<u> </u>		

Table 19: User Proximity Safety

Test ID: 1.13	Shut Down Bu	tton Locations	Status: TBT
Description: The distance	from pinch points to a stop buttor	n is measured.	
Pass/Fail Condition: This test is passed if there are shut down buttons located within the smallest reach of a typical adu of pinch points.			
Pre-Conditions: None.			
Input: The distance from	pinch points when the system is m	noved to various positions.	
_	own buttons are always less than pical adult from pinch points.	Actual Results:	
Post-Conditions: None.			

Table 20: Shut Down Buttons

Test ID: 2.1 User Input	to Arduino	Status: TBT
Description: User applies input, then the Arduino indicates a	a message was received	
Pass/Fail Condition: Arduino output to console correct desired status		
Pre-Conditions: None		
Input: User pressed input button		
Expected Results: Related console output: make shot, can-	Actual Results:	
cel, or move, depending on the button pressed  Post-Conditions: None		

Table 21: User Input to Arduino

Test ID: 2.2 Current Phys	cal State: X-Rail	Status: TBT	
Description: Verify that the system can detect the machin	e's current physical state at certain locations al	ong the x-rail.	
Pass/Fail Condition: This condition is passed if both sensors are triggered.			
Pre-Conditions: None			
Input: Attempt to move system along the x-rail to the lov	er-limit position then the upper limit position.		
Expected Results: X-rail sensors indicate that the system			
in lower-limit/upper-limit positions and motion is stopped			
Post-Conditions: None			

Table 22: Current Physical State: X-Rail

# 4 Electrical System

Test ID: 2.3	Current Physica	al State: Y-Rail	Status: TBT
Description: Verify that t	the system can detect the machine's	s current physical state at certain locations alo	ong the y-rail.
Pass/Fail Condition: This condition is passed if both sensors are triggered.			
Pre-Conditions: None			
Input: Attempt to move s	system along the y-rail to the lower	-limit position then the upper limit position.	
1 *	sensors indicate that the system is positions and motion is stopped.	Actual Results:	
Post-Conditions: None			

Table 23: Current Physical State: Y-Rail

Test ID: 2.4	Current Physical S	State: Rotation	Status: TBT
Description: Verify that	the system can detect the machine's c	current physical state at certain angu	lar positions.
Pass/Fail Condition: This condition is passed if the sensor indicates that the system in the position the machine is actual in to within 0.3 degrees.		he machine is actually	
Pre-Conditions: None			
Input: Rotate the end-ef	ffector to various set positions.		
Expected Results: Sens reference position.	or indicates that the system is in	Actual Results:	
Post-Conditions: None			

Table 24: Current Physical State: Rotation

Test ID: 2.5	Current Physical S	State: End-Effector	Status: TBT
Description: Verify that the sy effector's range of motion.	stem can detect the machine	e's current physical state at certain	locations along the end-
Pass/Fail Condition: This condmillimetres.	lition is passed if the sensors	s indicate that the system in in the	target position within 2
Pre-Conditions: None			
Input: Predetermined target lo	cations		
Expected Results: End-effector end-effector is in the target local		Actual Results:	
Post-Conditions: None			

Table 25: Current Physical State: End-Effector

Test ID: 2.6	Check for Exposed Circuitry	Status: TBT	
Description: Circuitry will be inspected	d to ensure none is exposed.		
Pass/Fail Condition: This test is passed if no circuitry is exposed.			
Pre-Conditions: None.			
Input: Result of wire inspection.			
Expected Results: No exposed circuitry	y. Actual Results:		
Post-Conditions: None.			

Table 26: Check for Exposed Circuitry

Test ID: 2.7	Sensitive Component Isolation f	from High Voltage Stat	tus: TBT
Description: The vo	oltage near sensitive components will be measured	to ensure they are at safe levels.	
Pass/Fail Condition: This test is passed if wires connected to sensitive components fall within their maximum parameters as specified by the device.			rameters
Pre-Conditions: No	ne.		
Input: Inspect wires	s connected to electrical equipment stated above.		
Expected Results: safely high voltage.	All components are isolated from un- Actual	Results:	
Post-Conditions: No	one.		

Table 27: Sensitive Component Isolation from High Voltage

Test ID: 2.8	Voltage Regulation	Status: TBT
Description: The circuit to the $\mu C$ wi	ill be provided various voltages and t.	
Pass/Fail Condition: This test is past requirements.	ssed if the output voltage from the transformer is w	within the required $\mu C$ voltage
Pre-Conditions: None.		
Input: Reading of voltage fed into $\mu$ C	Cusing a multimeter.	
Expected Results: Voltage is within 1	2 V DC. Actual Results:	
Post-Conditions: None.		

Table 28: Voltage Regulation

Test ID: 2.9	Circuit Breakers	Status: TBT
Description: High voltage will	be applied to components to ensure that the circuit brea	akers perform as expected.
Pass/Fail Condition: This test applied.	is passed if the circuits to all high voltage components a	re broken before unsafe voltage is
Pre-Conditions: None.		
Input: Sufficiently hight voltage	e.	
Expected Results: All circuits v ken.	with unsafe voltages are bro- Actual Results:	
Post-Conditions: None.		

Table 29: Circuit Breakers

Test ID: 2.10	AC/DC (	Converter	Status: TBT
Description: Verify that the tr	ansformer converts AC to DC	at the appropriate voltage.	
Pass/Fail Condition: This cond	dition is passed if the output v	voltage is a DC voltage within	
Pre-Conditions: None			
Input: Multimeter output volt	age readings from the transfor	mer.	
Expected Results: The outposition within	ut voltage is a DC voltage	Actual Results:	
Post-Conditions: None			

Table 30: AC/DC Converter

## 5 Software System

The software system is comprised of four main components: a control system running on an Arduino microcontroller, an automated image capture application running on an Android smartphone, as well a visual recognition program and smart shot selection program running on a PC. On top of the typical suite of unit tests to verify correctness of methods, rigorous system testing will also be crucial to adequately test this system.

#### 5.1 Unit Tests

This section will provide a plethora of test cases which aim to prove correctness of the program. Each individual class will be tested in order to make finding specific test cases easier.

Test ID: 3.1.1	Module	e: Ball	Status: TBT
	Ball Constructo	or Good Inputs	
Pass/Fail Conditions: This	test is passed if all the fields inside	de of Ball are correctly initialized.	
Pre-Conditions: None			
Input: 1, 0.7, 0			
Expected Results: A new coordinate 0.7, and the value	v ball with x-coordinate 1, y-ue 0.	Actual Results:	
Post-Conditions: A new Ba	all object should be available.		

Table 31: Ball Constructor Good Inputs

Test ID: 3.1.2	Module: Ball	Status: TBT
	Ball Constructor Large X	
Pass/Fail Conditions: This test	t is passed if an IllegalArgumentException is thrown	
Pre-Conditions: None		
Input: 1.87658, 0.7, 0		
Expected Results: An IllegalA thrown.	rgumentException has been Actual Results:	
Post-Conditions: There should	not have been a Ball created.	

Table 32: Ball Constructor Large X

### 5.1.1 PC Controller Program

**Ball Tests** 

## ${\bf Inference Engine\ Tests}$

Test ID: 3.1.3	Module: Ball	Status: TBT
	Ball Constructor Large Y	
Pass/Fail Conditions: This test	t is passed if an IllegalArgumentException is thrown	
Pre-Conditions: None		
Input: 1, 0.94958, 0		
Expected Results: An IllegalA thrown.	rgumentException has been Actual Results:	
Post-Conditions: There should	not have been a Ball created.	

Table 33: Ball Constructor Large  $\mathbf{Y}$ 

Test ID: 3.1.4	Module: Ball	Status: TBT
	Ball Constructor Small X	
Pass/Fail Conditions: This te	est is passed if an IllegalArgumentException is thrown	
Pre-Conditions: None		
Input: -1.001, 0.7, 0		
Expected Results: An Illegal thrown.	ArgumentException has been   Actual Results:	
Post-Conditions: There shoul	d not have been a Ball created.	

Table 34: Ball Constructor Small X

Test ID: 3.1.5	Module: Ball	Status: TBT
	Ball Constructor Small Y	
Pass/Fail Conditions: This test	is passed if an IllegalArgumentException is thrown	
Pre-Conditions: None		
Input: 1, -1.001, 0		
Expected Results: An IllegalArg thrown.	gumentException has been Actual Results:	
Post-Conditions: There should r	not have been a Ball created.	

Table 35: Ball Constructor Small Y

Test ID: 3.1.6	Module: Ball	Status: TBT
	Ball Constructor Small Value	
Pass/Fail Conditions: This	test is passed if an IllegalArgumentException is thrown	
Pre-Conditions: None		
Input: 1, 0.7, -1		
Expected Results: An Illegathrown.	alArgumentException has been Actual Results:	
Post-Conditions: There show	uld not have been a Ball created.	

Table 36: Ball Constructor Small Value

Test ID: 3.1.7	Module: Ball	Status: TBT
	Ball Constructor Large Value	
Pass/Fail Conditions: This te	est is passed if an IllegalArgumentException is thrown.	
Pre-Conditions: None		
Input: 1, 0.7, 16		
Expected Results: An Illegal thrown.	lArgumentException has been Actual Results:	
Post-Conditions: There should	ld not have been a Ball created.	

Table 37: Ball Constructor Large Value

Test ID: 3.1.8	Module: InferenceEngine	Status: TBT	
	Updating Table State		
Pass/Fail Conditions: This test is passed if	all post-conditions are met.		
Pre-Conditions: None			
Input: A 16-by-2 array of doubles that are valid positions, BallType.STRIPES			
Expected Results: None	Actual Results: None		
Post-Conditions: 1. Stored BallType is BallType.STRIPE 2. The stored positions array is the sam 3. The stored best shot is null. 4. The stored table state reflects the positions.	e as the one passed in.		
4. The stored table state renects the pos	strons passed in.		

Table 38: Updating Table State

Test ID: 3.1.9	Module: Infe	erenceEngine	Status: TBT
	Selecting an	Optimal Shot	
Pass/Fail Conditions: This te	st is passed if a reasonable Sho	t is returned.	
Pre-Conditions: The current table state is not null and the current ball type is not null or BallType.CUE.			
Input: None			
Expected Results: A reasonabing the right ball, valid x-/y-o	ble Shot (no bank shots, shoot-coordinates).	Actual Results:	
Post-Conditions: The best shot for the current table state is stored.			

Table 39: Selecting an Optimal Shot

Test ID: 3.1.10	Module: PCCommunicator	Status: TBT
	Read Valid Table State from File	
Pass/Fail Conditions: This te	est is passed if the output matches the data in the text file.	
Pre-Conditions: None.		
Input: A text file with 16 ball	l positions	
Expected Results: The 16 ba file.	all positions stored in the text   Actual Results:	
Post-Conditions: None.		

Table 40: Read Valid Table State from File

Test ID: 3.1.11	Module: PCC	ommunicator	Status: TBT
	Read Table State from	m Non-Existent File	
Pass/Fail Conditions: Tl	his test is passed if a FileNotFoundE	exception is thrown.	
Pre-Conditions: None.			
Input: None.			
Expected Results: A File	eNotFoundException is thrown.	Actual Results:	
Post-Conditions: None.			

Table 41: Read Table State from Non-Existent File

Test ID: 3.1.12	Module: PCCommunicator	Status: TBT	
	Read Table State from File with Invalid Data		
Pass/Fail Conditions: This test is passed if an InputMismatchException is thrown.			
Pre-Conditions: None.			
Input: A file containing the text "Bad data".			
Expected Results: An InputMismatchException is thrown. Actual Results:			
Post-Conditions: None.		_	

Table 42: Read Table State from File with Invalid Data

Test ID: 3.1.13	Module: PCCommunicator	Status: TBT
	Initiating the VR Program	
Pass/Fail Conditions: The te	est is passed if the VR Program has been run.	
Pre-Conditions: None.		
Input: None.		
Expected Results: Program been updated.	is run and TableState.csv has Actual Results:	
Post-Conditions: TableState.	csy contains the results of the VR Program.	

Table 43: Initiating the VR Program  $\,$ 

## **PCCommunicator Tests**

## Shot Tests

Test ID: 3.1.14	Module: Shot	Status: TBT
	Shot Constructor Good Inputs	
Pass/Fail Conditions: This test	t is passed if the Shot is successfully created and stores the	e correct information.
Pre-Conditions: None		
Input: 1, 0.5, 3.5, 1		
Expected Results: A new Shot y-coordinate of 0.5, an angle of	*	
Post-Conditions: Shot has been	n created.	

Table 44: Shot Constructor Good Inputs

Test ID: 3.1.15	Module: Shot	Status: TBT
	Shot Constructor Large X	
Pass/Fail Conditions: This test i	s passed if an IllegalArgumentException is thrown.	
Pre-Conditions: None		
Input: 1.87658, 0.5, 3.5, 1		
Expected Results: An IllegalArg	umentException is thrown. Actual Results:	
Post-Conditions: Shot has not be	een created.	

Table 45: Shot Constructor Large X

Test ID: 3.1.16	Module: Shot	Status: TBT
	Shot Constructor Small X	
Pass/Fail Conditions: This test is	s passed if an IllegalArgumentException is thrown.	
Pre-Conditions: None		
Input: -0.001, 0.5, 3.5, 1		
Expected Results: An IllegalArgu	mentException is thrown. Actual Results:	
Post-Conditions: Shot has not be	en created.	

Table 46: Shot Constructor Small X

Test ID: 3.1.17	Module: Shot	Status: TBT
	Shot Constructor Large Y	
Pass/Fail Conditions: This to	est is passed if an IllegalArgumentException is thrown.	
Pre-Conditions: None		
Input: 1, 0.94958, 3.5, 1		
Expected Results: An Illegal	ArgumentException is thrown.   Actual Results:	
Post-Conditions: Shot has no	at been created	

Table 47: Shot Constructor Large Y

Test ID: 3.1.18	Module	e: Shot	Status: TBT
	Shot Constru	ctor Small Y	
Pass/Fail Conditions: This test i	s passed if an IllegalArgume	ntException is thrown.	
Pre-Conditions: None			
Input: 1, -0.001, 3.5, 1			
Expected Results: An IllegalArgu	mentException is thrown.	Actual Results:	
Post-Conditions: Shot has not be	een created.		

Table 48: Shot Constructor Small Y

Test ID: 3.1.19	Module: Shot	Status: TBT
	Shot Constructor Large Angle	
Pass/Fail Conditions: This	test is passed if an IllegalArgumentException is thrown.	
Pre-Conditions: None		
Input: 1, 0.5, 6.284, 1		
Expected Results: An Illega	alArgumentException is thrown. Actual Results:	
Post-Conditions: Shot has a	not been created.	

Table 49: Shot Constructor Large Angle

Test ID: 3.1.20	Module: Shot	Status: TBT
	Shot Constructor Small Y	
Pass/Fail Conditions: This test i	s passed if an IllegalArgumentException is thrown.	
Pre-Conditions: None		
Input: 1, 0.5, -0.01, 1		
Expected Results: An IllegalArgu	umentException is thrown. Actual Results:	
Post-Conditions: Shot has not be	een created.	

Table 50: Shot Constructor Small Angle

Test ID: 3.1.21	Module: Shot	Status: TBT
	Shot Constructor Large Power	
Pass/Fail Conditions: This test	is passed if an IllegalArgumentException is thrown.	
Pre-Conditions: None		
Input: 1, 0.5, 3.5, 1.001		
Expected Results: An IllegalAr	gumentException is thrown. Actual Results:	
Post-Conditions: Shot has not	been created.	

Table 51: Shot Constructor Large Power

Test ID: 3.1.22	Module: Shot	Status: TBT
	Shot Constructor Small Power	
Pass/Fail Conditions: This te	est is passed if an IllegalArgumentException is thrown.	
Pre-Conditions: None		
Input: 1, 0.5, 3.5, 0		
Expected Results: An Illegal	ArgumentException is thrown. Actual Results:	
Post-Conditions: Shot has no	t been created.

#### Aligned Shot

Pass/Fail Conditions: This test is passed if the target ball is sunk by the machine 50% of the time and the shot should be made within 90 seconds (as per the *Summary and Goals* document).

Pre-Conditions: Machine must not be currently moving or taking a shot. There are three balls on the table, the cue ball, the target ball, and the eight ball. The cue ball, target ball, and one of the pockets are aligned near perfectly along an imaginary line. The eight ball is not in a position to interfere with motion of the balls along that line.

Input: Take Shot button pressed.

Post-Conditions: The eight ball should remain on the table. The target ball should be sunk. There are no requirements for the cue ball, but bonus points if it remains on the table.

Table 68: Aligned Shot

Test ID: 4.2 Module: System Status: TBT

#### **Angled Shot**

Pass/Fail Conditions: This test is passed if the target ball is sunk by the machine 50% of the time and the shot should be made within 90 seconds (as per the *Summary and Goals* document).

Pre-Conditions: Machine must not be currently moving or taking a shot. There are three balls on the table, the cue ball, the target ball, and the eight ball. There should be a shot that can be made with a modest angle that will sink the target ball. The eight ball is not in a position to interfere with expected motion of the balls.

Input: Take Shot button pressed.

Post-Conditions: The eight ball should remain on the table. The target ball should be sunk. There are no requirements for the cue ball, but bonus points if it remains on the table.

Table 69: Angled Shot

#### 5.1.3 $\mu$ C Program

Certain functions of this specific program (such as functionality of sensors) are tested in the electrical section and so will not be tested again here.

#### 5.2 System Tests

Test ID: 4.3	Module:	System	Status: TBT
	Shot Cancelled	Before Motion	
Pass/Fail Conditions: Th	is test is passed if the machine does	s not move.	
Pre-Conditions: None.			
Input:			
Take Shot button pressed	1,		
Then Cancel button pressed before machine moves.			
Expected Results: The m	nachine should cancel the instruc-	Actual Results:	
tion and not move.			
Post-Conditions: The machine should not have moved or be moving.			

Table 70: Shot Cancelled Before Motion

Test ID: 4.4	Module: System	Status: TBT	
Shot Cancelled During Motion			
Pass/Fail Conditions: This test is passed if the machine ceases movement within 2 seconds.			
Pre-Conditions: None.			
Input:  Take Shot button pressed,			
Then Cancel button pressed while machine is moving.			
Expected Results: The machi			
Post-Conditions: The machine should not be moving.			

Table 71: Shot Cancelled During Motion

Test ID: 4.5	Module:	System	Status: TBT	
	Move Request (To Z	Zero X-Coordinate)		
Pass/Fail Conditions: T	Pass/Fail Conditions: The machine moves to the zero x-coordinate within 20 seconds.			
Pre-Conditions: Machine's y-rail is located closer to the large x-coordinate.				
Input:  Move button pressed  Expected Results: The	e machine should move to the zero	Actual Results:		
x-coordinate of the table		Tioudai Itosuius.		
Post-Conditions: The machine should be located at the zero x-coordinate.				

Table 72: Move Request (To Zero X-Coordinate)

Test ID: 4.6	Module:	System	Status: TBT			
Move Request (To Largest X-Coordinate)						
Pass/Fail Conditions: The machine moves to the largest x-coordinate within 20 seconds.						
Pre-Conditions: Machine's y-rail is located closer to the zero x-coordinate.						
1 *	nachine should move to the largest	Actual Results:				
x-coordinate of the table.	chine should be located at the large					

Table 73: Move Request (To Largest X-Coordinate)

Test ID: 4.7	Shot Power Modification	Status: TBT		
1	not be able to modify system to perform unsafe actions such as The test will attempt to make the system do just that.	setting the power of a shot		
Pass/Fail Condition: This test is passed if the user cannot modify the power the shot beyond system parameters.				
Pre-Conditions: None.				
Input: User attemtpts to take a shot with power outside of system parameters.				
Expected Results: System d of force.	oes not take a shot at that level Actual Results:			
Post-Conditions: None.				

Table 74: Shot Power Modification

Test ID: 4.8	Module:	System	Status: TBT			
Check For Political Correctness						
Pass/Fail Conditions: All interviewees agree that there are no direct references to any religious or political groups.						
Pre-Conditions: None.						
Input: 20 colleagues will be asked to give their opinion on whether the system created has no direct reference to any religious or political groups.						
Expected Results: Colleagues references to any religious or p	decide that there are no direct political groups.	Actual Results:				
Post-Conditions: None.						

Table 75: Check For Legality and Political Correctness

## 6 Summary of Results

This section will be completed once the first version of the system is completed and all tests can be run.
