Table 1: Revision History

1 Introduction

This document will provide a specification of a test plan for an automated pool playing robot and report on the results of that plan.

1.1 Overview

This document breaks down the required testing for each domain of the system. It begins with the hardware aspect, then moves to the electrical side and then finishes with software. Each section will provide a traceability matrix to map the requirements to tests that check their completion and then go into further detail to describe each test case. Lastly, a summary of the results of testing will be provided to conclude the document.

1.2 Purpose

The aim of this document is to illuminate any design flaws, software bugs, or other issues in the system. Once these issues are discovered, the engineering team will be able to work on eliminating them or minimizing their frequency and consequences.

1.3 Naming Conventions & Definitions

This section outlines the various definitions, acronyms and abbreviations that will be used throughout this document in order to familiarize the reader prior to reading.

1.3.1 Definitions

Table 2 lists the definitions used in this document. The definitions given below are specific to this document and may not be identical to definitions of these terms in common use. The purpose of this section is to assist the user in understanding the requirements for the system.

Table 2: Definitions

Term	Meaning
X-axis	Distance along the length of the pool
	table
Y-axis	Distance across the width of the pool
	table
Z-axis	Height above the pool table
End-effector	The end of the arm that will strike the
	cue ball
θ	Rotational angle of end-effector
Cue	End-effector
Personal Computer	A laptop that will be used to run the
	more involved computational tasks such
	as visual recognition and the shot selec-
	tion algorithm
Camera	Some form of image capture device (e.g.
	a digital camera, smartphone with a
	camera, etc.)
Table State	The current positions of all the balls on
	the table
Entity	Classes that have a state, behaviour
	and identity (e.g. Book, Car, Person,
	etc.)
Boundary	Classes that interact with users or ex-
	ternal systems
Double	Double-precision floating point num-
	bers

1.3.2 Acronyms & Abbreviations

Table 3 lists the acronyms and abbreviations used in this document.

Table 3: Acronyms and Abbreviations

Acronym/Abbreviation	Meaning
VR	Visual Recognition
PC	Personal Computer
μC	Micro-Controller
CRC	Class Responsibility Collaboration
TBT	To Be Tested

2 Mechanical Components

Test ID: 12.1 Sychronious 3	Motion in X Rail Status: TBT			
Description: Verify that X-Rails can synchronously move while loaded	to the same location at the same speed without getting stuck			
Pass/Fail Condition: If rail moves adequately and quickly as expected				
Pre-Conditions: None				
Input: Location along x-direction (i.e. 2000 steps)				
Expected Results: Smooth and consistent motion along axiuntil position is met. Followed by an immediate stop	s Actual Results:			
Post-Conditions: Rails are stationary with no slip.				

Table 4: Ball Constructor Large X

Test ID: 12.2	Motion is	n Y Rail	Status: TBT
Description: Verify that Y-Rail can r	nove to a location withou	nt getting stuck while loaded	
Pass/Fail Condition: If rail moves adequately and quickly as expected			
Pre-Conditions: None			
Input: Location along y-direction			
Expected Results: Smooth and constuntil position is met. Followed by at	9	Actual Results:	
Post-Conditions: Rail is stationary	with no slip.		

Table 5: Ball Constructor Large X

Test ID: 12.3 End-Effect	or Orientation	Status: TBT	
Description: Verify that EE-Base Motor can orient to a sp	ecific angle without getting stuck while loaded		
Pass/Fail Condition: If motor turns adequately and quickly as expected to correct angle			
Pre-Conditions: None			
Input: Angle of orientation with respect to the x-axis			
Expected Results: Smooth and consistent motion until or entation is met. Followed by an immediate stop	- Actual Results:		
Post-Conditions: Motor is stationary.			

Table 6: Ball Constructor Large X

Test ID: 13.1	Shooting Command	Status: TBT
Description: Arduino receive	ed command to take shot	
Pass/Fail Condition: Arduino initiates shot taking process		
Pre-Conditions: System powered on and ready to change states		
Input: Command to Arduino to take shot		
Expected Results: User commands system to shoot. Ardula Results: duino initiates shot taking process.		
Post-Conditions: Shot is tak	ken and balls are settled	

Table 7: Ball Constructor Large X

Test ID: 13.2	Shooting Mechan	nism Orientation	Status: TBT
Description: EE is positioned	correctly and waiting comman	d to power piston	
Pass/Fail Condition: Piston is settled at correct oreintation, awaiting command to actuate piston			
Pre-Conditions: Motors orient piston to proper orentation			
Input: Position and orientation	n components sent to Arduino		
Expected Results: System moves to desired location and Actual Results: waits for piston signal			
Post-Conditions: Piston can be safely actauted and strike cue ball			

Table 8: Ball Constructor Large X

3 Electrical System

4 Software System

The software system is comprised of four main components: a control system running on an Arduino microcontroller, an automated image capture application running on an Android smartphone, as well a visual recognition program and smart

Test ID: 14.1	Jser Input to Arduino	Status: TBT
Description: User applies input, then the Ardu	nino indicated a received message	
Pass/Fail Condition: Arduino output to console correct desired status		
Pre-Conditions: None		
Input: User pressed status button		
Expected Results: Console output	Actual Results:	
Post-Conditions: None		

Table 9: Ball Constructor Large X

Test ID: 14.2	Emergency Stop	Status: TBT	
Description: Stop command d	during runtime		
Pass/Fail Condition: Upon us	Pass/Fail Condition: Upon user request the system stops immediately		
Pre-Conditions: System is preforming an action			
Input: Stop command is sent			
Expected Results: System halts immediately along with visual indication Actual Results:			
Post-Conditions: System is me	Post-Conditions: System is motion unless and awaiting next command		

Table 10: Ball Constructor Large X

Test ID: 15.1 Move Away	Command Status: TBT	
Description: Physical system is interfering with players abili move over	ty to approach the table. The user commands the system to	
Pass/Fail Condition: Upon user command the system moves to predetermined location		
Pre-Conditions: None		
Input: Command to Arduino to move in desired location on either side of table		
Expected Results: System indicates acceptance of command and preforms action. Upon completion the system stops.	Actual Results:	
Post-Conditions: System is motionless and awaits next command.		

Table 11: Ball Constructor Large X

Test ID: 16.1 Perimeter	Coverage	Status: TBT
Description: EE will be moved around the table to ensure the	nat it is able to reach all locations and orientat	tions
Pass/Fail Condition: EE is capable of completing a full trip around the perimeter without stops		
Pre-Conditions: None		
Input: Motion command from Arduino		
Expected Results: EE will travel around perimeter of table.	Actual Results:	
Inspection that its location is sufficient for shot-taking is required.		
Post-Conditions: System awaits next command.		

Table 12: Ball Constructor Large X

Test ID: 16.2 Ball Avoidance	Status: TBT	
Description: As the EE is moving around the table it much avoid the balls to not interfere with gam	ıeplay	
Pass/Fail Condition: Able to move randomly around table without moving rolling or stationary balls		
Pre-Conditions: Ball in motion OR stationary		
Input: Random motion along table		
Expected Results: EE travels directly over balls and does not make contact Actual Results:		
Post-Conditions: None		

Table 13: Ball Constructor Large X

Test ID: 17.1	Random Shot Request	Status: TBT
Description: User can initiate s	shot taking process at any time	
Pass/Fail Condition: During ar	bitrary state the user requests to attempt shot and the s	ystem initiates shot taking process
Pre-Conditions: Arbitrary state	e	
Input: Take a Shot command		
Expected Results: System swit taking sequence	ches state and initiates shot Actual Results:	
Post-Conditions: None		

Table 14: Ball Constructor Large X

Test ID: n	Module	e: Ball	Status: TBT
	Ball Constructo	or Good Inputs	
Pass/Fail Conditions: This	s test is passed if all the fields inside	de of Ball are correctly initialized.	
Pre-Conditions: None			
Input: 1, 0.7, 0			
Expected Results: A new coordinate 0.7, and the val	w ball with x-coordinate 1, y-ue 0.	Actual Results:	
Post-Conditions: A new Ba	all object should be available.		

Table 15: Ball Constructor Good Inputs

Test ID: n	Module	e: Ball	Status: TBT
	Ball Constru	ctor Large X	
Pass/Fail Conditions: This te	est is passed if an IllegalArgume	entException is thrown	
Pre-Conditions: None			
Input: 1.87658, 0.7, 0			
Expected Results: An Illegal thrown.	ArgumentException has been	Actual Results:	
Post-Conditions: There should	ld not have been a Ball created.		

Table 16: Ball Constructor Large X

shot selection program running on a PC. On top of the typical suite of unit tests to verify correctness of methods, rigorous system testing will also be crucial to adequately test this system.

The following traceability matrix will demonstrate that the tests to be performed prove that specified requirements have been met.

4.1 Unit Tests

This section will provide a plethora of test cases which should prove correctness of the program. Each individual class will be tested in order to make finding specific test cases easier.

4.1.1 PC Controller Program

Ball Tests

Test ID: n	Iodule: Ball	Status: TBT
Ball Cons	structor Large Y	
Pass/Fail Conditions: This test is passed if an IllegalAr	gumentException is thrown	
Pre-Conditions: None		
Input: 1, 0.94958, 0		
Expected Results: An IllegalArgumentException has be thrown.	een Actual Results:	
Post-Conditions: There should not have been a Ball cre	eated.	

Table 17: Ball Constructor Large Y

Test ID: n	Module: Ball	Status: TBT
	Ball Constructor Small X	
Pass/Fail Conditions: This	s test is passed if an IllegalArgumentException is thrown	
Pre-Conditions: None		
Input: -1.001, 0.7, 0		
Expected Results: An Ille thrown.	galArgumentException has been Actual Results:	
Post-Conditions: There she	ould not have been a Ball created.	

Table 18: Ball Constructor Small X

Test ID: n	Module: Ball	Status: TBT
	Ball Constructor Small Y	
Pass/Fail Conditions: This tes	st is passed if an IllegalArgumentException is thrown	
Pre-Conditions: None		
Input: 1, -1.001, 0		
Expected Results: An Illegal athrown.	ArgumentException has been Actual Results:	
Post-Conditions: There should	d not have been a Ball created.	

Table 19: Ball Constructor Small Y

Test ID: n	Modul	e: Ball	Status: TBT
	Ball Construct	or Small Value	
Pass/Fail Conditions: Thi	s test is passed if an IllegalArgume	entException is thrown	
Pre-Conditions: None			
Input: 1, 0.7, -1			
Expected Results: An Ille thrown.	egalArgumentException has been	Actual Results:	
Post-Conditions: There sh	ould not have been a Ball created.		

Table 20: Ball Constructor Small Value

Test ID: n	Module: Ball	Status: TBT
	Ball Constructor Large Value	
Pass/Fail Conditions: This	test is passed if an IllegalArgumentException is thrown.	
Pre-Conditions: None		
Input: 1, 0.7, 16		
Expected Results: An Illegathrown.	alArgumentException has been Actual Results:	
Post-Conditions: There show	uld not have been a Ball created.	

Table 21: Ball Constructor Large Value

InferenceEngine Tests

PCCommunicator Tests

Shot Tests

Test ID: n Module: InferenceEngine Status: TBT

Updating Table State

Pass/Fail Conditions: This test is passed if all post-conditions are met.

Pre-Conditions: None

Input: A 16-by-2 array of doubles that are valid positions, BallType.STRIPES

Expected Results: None Actual Results: None

Post-Conditions:

1. Stored BallType is BallType.STRIPES.

2. The stored positions array is the same as the one passed in.

Post-Conditions: The best shot for the current table state is stored.

3. The stored best shot is null.

4. The stored table state reflects the positions passed in.

Table 22: Updating Table State

Test ID: n Module: InferenceEngine Status: TBT

Selecting an Optimal Shot

Pass/Fail Conditions: This test is passed if a reasonable Shot is returned.

Pre-Conditions: The current table state is not null and the current ball type is not null or BallType.CUE.

Input: None

Expected Results: A reasonable Shot (no bank shots, shooting the right ball, valid x-/y-coordinates).

Actual Results:

Table 23: Selecting an Optimal Shot

Test ID: n Module: PCCommunicator

Read Valid Table State from File

Pass/Fail Conditions: This test is passed if the output matches the data in the text file.

Pre-Conditions: None.

Input: A text file with 16 ball positions

Expected Results: The 16 ball positions stored in the text | Actual Results: file.

Post-Conditions: None.

Table 24: Read Valid Table State from File

Test ID: n Module: PCCommunicator		Status: TBT
Read Table State f	rom Non-Existent File	
Pass/Fail Conditions: This test is passed if a FileNotFoundException is thrown.		
Pre-Conditions: None.		
Input: None.		
Expected Results: A FileNotFoundException is thrown.	Actual Results:	
Post-Conditions: None.		

Table 25: Read Table State from Non-Existent File

Test ID: n	est ID: n Module: PCCommunicator		
Read Table State from File with Invalid Data			
Pass/Fail Conditions: This test is passed if an InputMismatchException is thrown.			
Pre-Conditions: None.			
Input: A file containing the text "Bad data".			
Expected Results: An Ir	nputMismatchException is thrown.	Actual Results:	
Post-Conditions: None.			

Table 26: Read Table State from File with Invalid Data

Test ID: n	Module: Shot		Status: TBT
Shot Constructor Good Inputs			
Pass/Fail Conditions: This te	st is passed if the Shot is succe	essfully created and stores the	e correct information.
Pre-Conditions: None			
Input: 1, 0.5, 3.5, 1			
Expected Results: A new Shorty-coordinate of 0.5, an angle of	of 3.5, and a power of 1.	Actual Results:	
Post-Conditions: Shot has been created.			

Table 27: Shot Constructor Good Inputs

Test ID: n	Module: Shot	Status: TBT
Shot	Constructor Large X	
Pass/Fail Conditions: This test is passed if an Ill	legalArgumentException is thrown.	
Pre-Conditions: None		
Input: 1.87658, 0.5, 3.5, 1		
Expected Results: An IllegalArgumentException	is thrown. Actual Results:	
Post-Conditions: Shot has not been created		

Table 28: Shot Constructor Large X

Test ID: n Module: Shot			Status: TBT
	Shot Construct	or Small X	
Pass/Fail Conditions: This test is passed if an IllegalArgumentException is thrown.			
Pre-Conditions: None			
Input: -0.001, 0.5, 3.5, 1			
Expected Results: An IllegalA	rgumentException is thrown.	Actual Results:	
Post-Conditions: Shot has not	been created.		

Table 29: Shot Constructor Small X

Test ID: n	Module: Shot	Status: TBT
	Shot Constructor Large Y	
Pass/Fail Conditions: This te	est is passed if an IllegalArgumentException is thrown.	
Pre-Conditions: None		
Input: 1, 0.94958, 3.5, 1		
Expected Results: An Illegal	ArgumentException is thrown. Actual Results:	
Post-Conditions: Shot has no	t been created.	

Table 30: Shot Constructor Large Y

Test ID: n	Module: Shot	Status: TBT	
	Shot Constructor Small Y		
Pass/Fail Conditions: This	test is passed if an IllegalArgumentException is thrown.		
Pre-Conditions: None			
Input: 1, -0.001, 3.5, 1			
Expected Results: An Illega	lArgumentException is thrown. Actual Results:		
Post-Conditions: Shot has r	ot been created		

Table 31: Shot Constructor Small Y

Test ID: n	Module: Shot	Status: TBT	
	Shot Constructor Large Angle		
Pass/Fail Conditions: This test is passed if an IllegalArgumentException is thrown.			
Pre-Conditions: None			
Input: 1, 0.5, 6.284, 1			
Expected Results: An IllegalArgumentException is thrown. Actual Results:			
Post-Conditions: Shot has not	been created.		

Table 32: Shot Constructor Large Angle

SimulationInstance Tests TableState Tests

Test ID: n	Module: Shot	Status: TBT
Shot C	Constructor Small Y	
Pass/Fail Conditions: This test is passed if an Illega	alArgumentException is thrown.	
Pre-Conditions: None		
Input: 1, 0.5, -0.01, 1		
Expected Results: An IllegalArgumentException is	thrown. Actual Results:	
Post-Conditions: Shot has not been created		

Table 33: Shot Constructor Small Angle

Test ID: n	Module: Shot		
	Shot Constructor Large Power		
Pass/Fail Conditions: This test is passed if an IllegalArgumentException is thrown.			
Pre-Conditions: None			
Input: 1, 0.5, 3.5, 1.001			
Expected Results: An Illegal	ArgumentException is thrown. Actual Results:		
Post-Conditions: Shot has no	t been created.		

Table 34: Shot Constructor Large Power

Test ID: n	Module: Shot	Status: TBT	
	Shot Constructor Small Power		
Pass/Fail Conditions: This	test is passed if an IllegalArgumentException is thrown.		
Pre-Conditions: None			
Input: 1, 0.5, 3.5, 0			
Expected Results: An Illega	alArgumentException is thrown. Actual Results:		
Post-Conditions: Shot has r	not been created.		

Table 35: Shot Constructor Small Power

Test ID: n	lest ID: n Module: TableState			
TableState Constructor Good Inputs				
Pass/Fail Conditions: This tes	et is passed if the TableState is	s successfully created and stores	s the correct information.	
Pre-Conditions: None				
Input: A 16-by-2 array of doubles that hold the position of the balls				
Expected Results: A new TableState with 16 balls in positions corresponding to those passed in. Actual Results:				
Post-Conditions: TableState h	as been created.			

Table 36: TableState Constructor Good Inputs

Test ID: n	Module: 7	ΓableState	Status: TBT
	TableState Constructo	or Too Many Elements	
Pass/Fail Conditions: This	test is passed if the TableState is	s not created.	
Pre-Conditions: None			
Input: A 17-by-2 array of doubles			
Expected Results: An Illeg thrown.	galArgumentException has been	Actual Results:	
Post-Conditions: TableStat	te has not been created.		

Table 37: TableState Constructor Too Many Elements

Test ID: n	Module: 7	ΓableState	Status: TBT		
TableState Constructor Not Enough Elements					
Pass/Fail Conditions: This test is passed if the TableState is not created.					
Pre-Conditions: None					
Input: A 15-by-2 array of doubles					
Expected Results: An Ille thrown.	egalArgumentException has been	Actual Results:			
Post-Conditions: TableSta	ate has not been created.				

Table 38: TableState Constructor Not Enough Elements

Test ID: n	Module: T	l'ableState	Status: TBT		
TableState Constructor Elements Too Small					
Pass/Fail Conditions: This test is passed if the TableState is not created.					
Pre-Conditions: None					
Input: A 16-by-1 array of doubles					
Expected Results: An Ille thrown.	egalArgumentException has been	Actual Results:			
Post-Conditions: TableSta	ate has not been created.				

Table 39: TableState Constructor Elements Too Small

Test ID: n	Module:	ΓableState	Status: TBT	
TableState Constructor Elements Too Large				
Pass/Fail Conditions: This test is passed if the TableState is not created.				
Pre-Conditions: None				
Input: A 16-by-3 array of doubles				
Expected Results: An I thrown.	IllegalArgumentException has been	Actual Results:		
Post-Conditions: TableS	State has not been created.			

Table 40: TableState Constructor Elements Too Large

Test ID: n	Module: 7	ΓableState	Status: TBT		
TableState Deep Copy					
Pass/Fail Conditions: This test is passed if the array of Balls returned have the same values but are not the same Objects.					
Pre-Conditions: A TableState exists in memory.					
Input: None.					
Expected Results: An arra positions as those in the Tal	y of Balls that have the same bleState.	Actual Results:			
Post-Conditions: None.
